Banking Hackers Left a Clue That May Link Them to North Korea

Michael Kan | Apr 04

CSO Online - The so-called Lazarus Group has been eyed as a possible culprit behind the heists, which included last February's \$81 million theft from Bangladesh's central bank through the SWIFT transaction software. [Read More](#)

China's Information Warriors Are Growing More Disciplined, Say US Cyber Leaders

Patrick Tucker | Apr 04

Defense One - In January, China announced that the country will develop the world's first exascale super computer by the end of the year. The move follows years of steady and incremental improvements in information operations, Vice Adm. Tim White, commander of the U.S. Cyber National Mission Force. [Read More](#)

Samsung TVs Reportedly Ship With Major Hacking Flaws

Don Reisinger | Apr 04

Fortune - Samsung's televisions and wearables reportedly have serious vulnerabilities that could allow malicious hackers to remotely take control of them. [Read More](#)

Bill to Improve Small Business Cybersecurity Advances

Joseph Marks | Apr 05

Nextgov - The National Institute of Standards and Technology is already tasked broadly with helping small and medium businesses defend against cyberattacks. The legislation forwarded Wednesday would hammer down that broad requirement, directing the agency to create "clear and concise" resources to help small companies manage cyber risk and to create a cyber-savvy workplace culture. Taming the SaaS Security Wilderness

Mathias Thurman | Apr 03

Computerworld - The security risk that I am most focused on right now is this: Shadow IT and the consumerization of IT have put too many employee work activities out of sight of the security department.

Identifying and Managing Corporate Risk from Internal and External Stressors

Jordan Blask | Apr 03

Tucker Arensberg, P.C. - Minimizing litigation and the associated distraction from productivity, as well as, unavoidable expense begins with identifying corporate risk from internal and external stressors through proactive methods. Anything short of being proactive results in being reactionary and companies should expect that the cost associated with reaction will always be a significant multiple of the upfront cost of being proactive. Risk avoidance is not the same as risk mitigation. [Read More](#)
